

A W Goddard Fencing Ltd

A small family run business that specialise in residential and commercial fencing. Our experience spans over 50 years and customer satisfaction is of the utmost importance. We are primarily fencing contractors who pride ourselves with our workmanship. We feel that we shine above inferior companies offering the same service.

We only choose the best materials from local stockists, which is why we guarantee the materials as well as our workmanship for 12-months after completion.

Our brochure features images and information of standard style fencing which we hope you find useful in choosing your new style of fencing.

Fence Posts

For new fencing installations, your choice of fence post will determine the longevity of the fencing you require. Below are some of the most popular options, with ratings for aesthetics, strength, longevity, labour intensity and material cost.

Wooden Posts

For years timber posts have been used as the starting point for most fences. Whilst they give a more natural look to an outdoor space and can be painted/stained to match a design preference, they are less durable than the other options and require regular maintenance to last, which can be time consuming and costly.

Used for both panel fencing and continuous run fencing (closeboard/wooden palisade) and/or gates posts, our timber posts are pressure treated to HC4/UC4/Class 4 specification. This is the standard of treatment required for ground contact timber as determined by BS EN 335-1.

We only use 100mm square posts as a minimum for all new fence installations. This treatment on a 100mm x 100mm timber post, should give a desired service life (DSL) of 15 years.

Concrete Posts

Up until recently, concrete posts have always been the only other alternative to timber posts. Whilst they are more durable than timber posts, due to being reinforced with metal bars and require little maintenance, they are less aesthetically pleasing and with a recommended concrete gravel board can look 'stark' and 'industrial'.

However, you can paint them to create a different look. Neutral colours like white, beige, or gray can create a subtle look, while bold colours like black or charcoal can add a modern touch.

Concrete slotted posts are used for panel fencing and concrete recessed posts are used for continuous run fencing (closeboard/wooden palisade).

Our concrete products are textured dry cast, which are 15 - 20% stronger than the smooth wet cast concrete products and will last for up to 25 years.

Durapost

Launched in 2019, DuraPost is a product of Birkdale, a zero-carbon business that aims to create fencing solutions that benefit the planet and its customers.

A W Goddard Fencing is proud to be a Durapost trained installer. Which means we are trained by Durapost to deliver the highest quality service.

DuraPost is a fencing system that uses steel posts and composite panels to create a stylish, durable, and sustainable option for outdoor spaces.

DuraPost uses cold-rolled galvanized steel posts and composite panels that won't rot or crack. The steel posts are pre-galvanized to resist corrosion and come powder-coated in a variety of colours.

Durapost is maintenance free and comes with a guarantee of up to 25 years.

Durapost posts come powder coated in the following colours: Olive Grey, Sepia Brown & Anthracite Grey.

Jacksons Fencing

Jacksons Fencing was founded in 1947 and is now at the forefront of the 25-year guarantee for timber fencing.

A W Goddard fencing is proud to be an approved installer for Jacksons Fencing. Which means that we are in a network of the most successful, highly skilled professionals in the fencing and landscaping industry.

The Jacksons Fencing 'Jakcure' process adds 15% to the material costs, so Jakcured fencing will cost you marginally more than other fencing, but it will last many times longer, so when you use Jacksons Jakcured timber products, they are guaranteed for 25 years, which means you only need to buy them once and erect them once. That's real economy, or environmentally the best fencing you can buy.

Jacksons Fencing can provide slotted posts, used for panel fencing and square posts which are used for continuous run fencing (closeboard/wooden palisade) and/or gates posts.

Fencing Style

The next thing to choose after the type of post you've decided, is the fencing style. There are 2 main types of fencing style. Panel fencing and continuous run fencing. Panel fencing is the most popular garden fencing in the UK. Although there are more posts per metre than continuous run fencing, panel fencing is less labour intensive. It is also easier to repair a fence panel in existing posts.

Also, there is an abundance of styles now available. Which is the main reason why 90% of our residential works is panel fencing with the different style posts, already listed.

Below is a few of our most popular fence panels.

Waney Lap Panel

Waney lap panels are our most economic fencing panel. These are formed from waney edge boards that are horizontally overlapped and framed with rectangular battens and then completed with a weathered top capping.

Our waney edge panels are pressure treated for extra protection against rot however a timber gravel board can also be included to stop the panel having any ground contact.

Waney lap panels come in heights from 0.9m (3') high to 1.83m (6') high and all are a standard 1.83m (6') wide.

These panels are classed 'nice both sides'. Comes in standard brown or green colour.

Closeboard Panel

This pressure treated closeboard panel is made using featheredge boards, overlapped vertically which are all fixed to rear horizontal rails fitted with a top cap. These panels are more substantial than the Waney lap panel and are our current best seller as they offer excellent strength, durability and security at a reasonable price.

Again, a timber gravel board can also be included to stop the panel having any ground contact.

Closeboard panels come in heights from 0.9m (3') high to 1.83m (6') high and all are a standard 1.83m (6') wide

These panels have a 'nice' & 'not so nice' side. Comes in standard brown or green colour.

Decorative European Panels

Decorative panels are for customers looking for fencing that is more pleasing to the eye. These panels are pressure treated and there are numerous designs to choose from.

Popular panels in this range are:

- Omega Lattice
- Square Horizontal
- Slatted or Double Slatted
- Tongue & Groove lattice top

These panels come in heights from 0.9m high to 1.8m high and all are 1.8m wide, so will need expansion timbers to fit in between a standard 1.83m (6') wide bay.

These panels are classed 'nice both sides'.
Comes in green colour only.

Durapost Composite Fence Panels

Composite fence panels which are maintenance free and guaranteed for up to 25 years. with traditional style wood grain finish or more contemporary aesthetic.

These panels are modular and will need to be made up prior to the installation, meaning additional labour costs.

Popular panels in this range are:

- DuraPost URBAN
- DuraPost VENTO
- DuraPost PRIMA
- DuraPost SLEEK

These panels come in heights from 0.9m (3') high to 1.83m (6') high and all are a standard 1.83m (6') wide.

Jacksons Fencing Decorative Panels

Jacksons premium timber fence panels come with a 25 year guarantee against rot and insect attack. Using Their unique Jakcure pressure treatment process means the longevity and quality of their fence panels is unrivalled. They have a full range of different styles of fence panels so you can be sure you'll find a fence to suit.

You will also find decorative panel toppers/trellis to suit.

Popular panels in this range are:

- Horizontal & Vertical T&G
- Venetian Hit & Miss
- Chilham Double Sided
- Convex T&G

These panels come in green only and heights from 0.9m (3') high to 1.83m (6') high, all are a standard 1.83m (6') wide.

Continuous Run Fencing

Continuous run fencing is a type of fencing that can be installed in a continuous line, with posts that are only visible from the back of the fence. There are several types of continuous run fencing which are listed below:

Closeboard Fencing

Like the closeboard panel, closeboard fencing is made up of vertically, overlapped featheredge boards singularly nailed to horizontal rails which are connected to either timber posts, concrete posts or Duraposts.

This style of fencing on concrete recessed posts and with concrete gravel boards, is probably the strongest residential fencing that we can supply and install due to the size and strength of the concrete recessed post.

Continuous run fencing can follow the gradient of the land without the need to step down.

Set off with a heavy duty, deep grooved capping, this fence really is aesthetically pleasing.

This fence will have a 'nice' & 'not so nice' side. Comes in standard brown or green colour.

Estate Railings

We now offer continuous estate railings in either black or untreated to colour naturally with no loss of structural integrity.

Fence posts are driven in or concreted and the rail then simply threaded through and welded.

Perfect for country estates, farms, parkland and gardens. Our continuous welded system is designed for superior strength and longevity.

Comes in a standard 1.2m (4') high and with different post and rail options.

Wooden Palisade

Picket fencing allows you to mark out boundaries whilst not being too tall to see over or block out natural light. Made from wooden pales attached to horizontal rails for increased strength with gaps left between the pales.

Comes with either pointed top, round top or flat top wooden pales.

Post & Rail

Post and rail is one of the simplest forms of fencing. Rails and posts can be square-cut or rounded, and rails can be nailed or slotted into place. Post and rail fencing can also work as a base frame for wiring for livestock.

Post & Stock

Post and Stock netting is available in high tensile and light tensile options. Tensile strength determines the amount of pressure that can be put on the fence before it breaks.

Chain Link

Chain Link fencing is excellent for boundary fencing and security. Offering a choice of different wire gauges, Chain Link fencing ideal for variety of applications including sports fence and security access.

Timber Knee Rail

Timber Knee rail fencing is ideal for use for demarcation or around car parking areas. Made from superior quality softwood and galvanised straps for longer life.
